Motivation & Background

Topic : Android Application for Medical Booking System

This application allows android Mobile users to book an appointment to a medical centre. The name of the application is 'Chq Corona'. 'Chq Corona' enables users to book an appointment for a medical checkup and as we are aware of the pandemic Corona virus (Covid-19), it is risky for people who are infected to step outside.

The motivation for creating a Booking System is to ensure safety and convenience to the public. The application contains slots for booking and the user has to provide his personal details and answer a set of questions to confirm his booking.

Objectives

1. The application contains time and date slots that can be booked.
2. The application expects the user to enter his personal details like name, age, gender etc.
3. The application contains a set of questions regarding the symptoms.
4. The application shows a list of medical centres nearby.
5. The application also presents a route via maps to the medical centre.
